CORPORATE PROFILE / OCTOBER 2026

Building Ghana’s agricultural future.

Commercial poultry production anchored in the Volta Region, with a market-led plan to expand agricultural production, processing and producer partnerships.

Who we are

EL Giga Farms Limited is an established Ghanaian poultry business operating commercially since 2020, with farming operations at Abutia Adegblevi and an office in Ho. Our ambition is to develop commercially sound agricultural ventures that serve Ghanaian markets and, where justified, international buyers.

Our operational foundation

Core production	Table eggs, poultry and related agricultural products.
Existing farming base	Abutia Adegblevi, Volta Region. The company has historical farming experience at larger poultry capacity; current operating performance is verified separately during due diligence.
Market route	Products are sold through customer and distribution relationships, including JUKO Foods Ltd, which operates as a separate trading and market-access business.

Two sites, distinct expansion targets

Abutia - established site	Expansion targets: 30,000 layers and 10,000 broilers per month.
Hodzo - proposed development	More than 40,000 layers, 10,000 broilers per month, 1,000-goat project and a 500-birds/hour poultry processing concept.

All capacities above are long-term development targets, not current production or commissioned assets. Implementation depends on financing, demand, site studies and operating readiness.

OUR GROWTH PLATFORM

From production to connected markets.

The opportunity is to combine owned agricultural assets with services for independent producers and reliable access to buyers.

Planned value chains

Feed & inputs	A commercial feed manufacturing and agricultural inputs model built on validated cost and demand.
Horticulture & outgrowers	Buyer-led trials of bird's eye chilli, Legon 18 and suitable crops; partnerships with growers, traceable operations and quality protocols.
Processing & cold chain	Phased processing and cold storage services serving owned production and external producers when utilisation supports investment.
Circular agriculture	Safe treatment, testing and responsible use of poultry and livestock manure to support soil fertility. No organic certification is claimed.
Market access	Domestic distribution through business relationships, with prospective international buyer engagement based on specifications and compliance.

Leadership and governance

Management: Stephen Debre, Chief Executive Officer; Agatha Asare, Chief Financial Officer; Ernest Adzim, Chief Operating Officer; Joseph Kwame Seshie, Accounts Lead. Leadership profiles are available at elgigafarms.com.

Partner with us

We welcome discussions with commercial buyers, investors, financial institutions, technical partners and farmer organisations. Project-specific due-diligence materials and financial models are available through an appropriate engagement process.
